Update your training data

With a simple app login, your entire workout is automatically stored. This visual achievement does more than show progress, it builds a personal "Strength Resume," creating a deep, data-driven bond between the member and your facility.

Real-time Monitoring

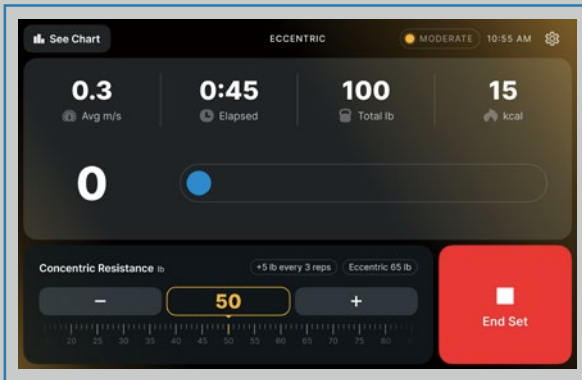

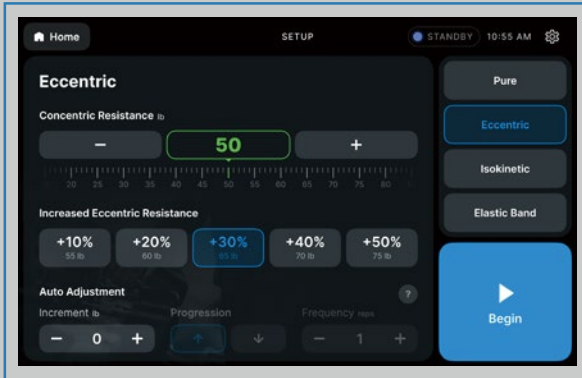

Through cloud-based management, facility owners can monitor machine status and usage loads in real-time, ensuring equipment remains safe and functional without manual inspections while significantly boosting operational efficiency through precise data analytics.

Pure Resistance for Hypertrophy

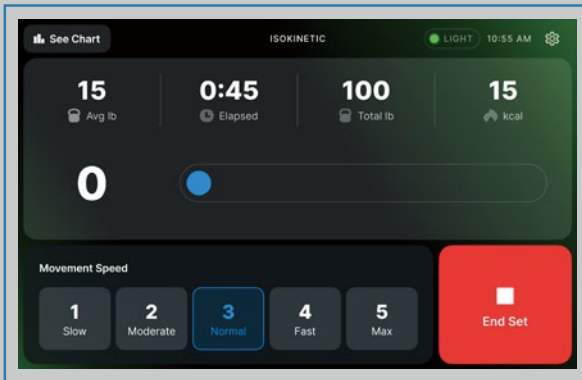

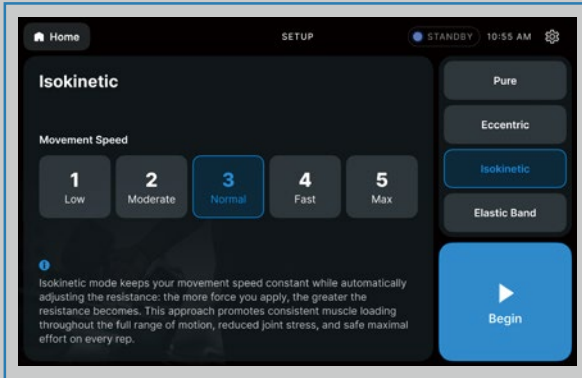

Building muscle success requires consistent repetitions. But now, i-Strength is your training partner, by your side, ready and able to adjust your weights, challenge and motivate you no matter what your goals.

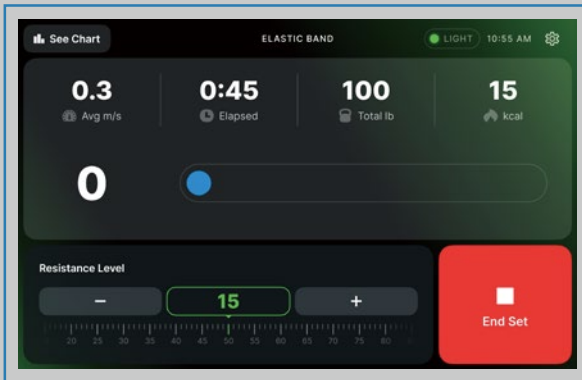

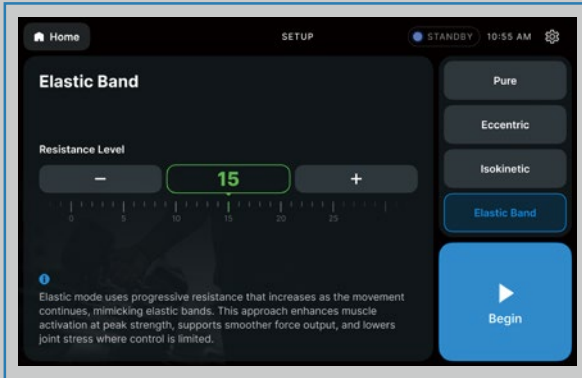

Eccentric Load For Strength

If you didn't know any better, you would think that eccentric strength training was a gym secret. But now meet i-Strength, your new training partner. Nobody will better challenge you and motivate you through those heavy negative drop-sets.

Isokinetic Control for Safety

It is no wonder that athletes turn toward Isokinetic training for rehabilitation. Create the joint integrity needed to quickly get back to performance. i-Force is the tool and the leader that can create this environment, matching the bi-directional resistance and safety controls needed for success.

Elastic Tension for Explosive Power

Like a smart rubber band. The further you pull, the greater the resistance gets. This "snappy" feeling wakes up your nervous system and your "fast twitch muscles." When you can press no-more you have created Isometrics, which are invaluable for the senior rehabilitation population.

Low Row

Low row challenges the entire body with stabilization while pulling with arms and upper back muscles

Dual foot bars allow users of all sizes a proper set-up and full range of motion

Low position of pulling handle helps keep elbows down, along the sides of body

i-Strength mechanical resistance system allows for a super smooth training

Electromechanical servo control mechanism offers Standard traditional, Eccentric, Isokinetic and Elastic training

IS-1001

PRODUCT WEIGHT	90kg / 198.6lb
PRODUCT DIMENSION	1516x 1210 x 1108mm / 59.7" x 47.6" x 43.6"
MIN. RESISTANCE	6kg / 13lb
MAX. RESISTANCE	120kg / 265lb
